

Samson ArborMaster®

It has come to our attention that there is some confusion in the marketplace about the published average strengths of Samson's ArborMaster® climbing line. The following information should provide clarification.

ArborMaster is sold under two product codes.

- Product code 348 is the standard offering and is available spliced and unspliced.
- Product Code 347 is for the CE Approved ArborMaster. The CE approval applies to only unspliced line.

Samson publishes the average strengths of these lines as follows:

- Samsonrope.com
 - Lists only Product Code 348, spliced Avg. Strength; 6,500 lb.
- [The Samson Arborist catalog](#)
 - Product Code 348, spliced Avg. Strength; 6,500 lb.
 - Product Code 347, unspliced Avg. Strength; 8,100 lb.

If you have questions or concerns [click here](#) to let us know.

Signed,

Charlotte Wells
